

Adaptiiv's Clinical Solutions

Adaptiiv's regulatory cleared software is used to design patient-matched, radiotherapy accessories.

Our easy-to-use clinical solution also enables 3D printing of accessories. Printing can be done in-house (Adaptiiv at the Point of Care) or outsourced through Adaptiiv on Demand*, where our validated digital manufacturing partner, HP, will print and ship accessories directly to your clinic.

Adaptiiv at the Point of Care

This solution works best for centers that have an established 3D printing facility or are looking to expand their internal 3D printing capacity.

Why use Adaptiiv at the Point of Care?

Using patient-matched 3D printed accessories can:

- Improve treatment accuracy and the patient experience.
- Reduce air gaps, spare healthy tissue, and provide superior dose distribution compared to traditional methods.

Adaptiiv On Demand

This solution is specifically designed for centers that are looking to leverage the advantages of our regulatory cleared software but are unable to commission or establish 3D printing services internally.

Why use Adaptiiv On Demand?

- Adaptiiv On Demand offers all the same benefits as Adaptiiv at the Point of Care.
- A pay-as-you-go offering with no upfront expenses. There is no need to compete for funding from your capital budget.

*Subject to pending regulatory clearance.
