

# DermaPlan RT

## Automated Skin Treatment Planning in Eclipse

### Why It Matters

Superficial radiation therapy planning is:

- **Time-consuming:** Takes up to 240 minutes per case.
- **Inconsistent:** Prone to inter-planner variability.
- **A growing challenge:** Due to staff shortages and tightening reimbursement.

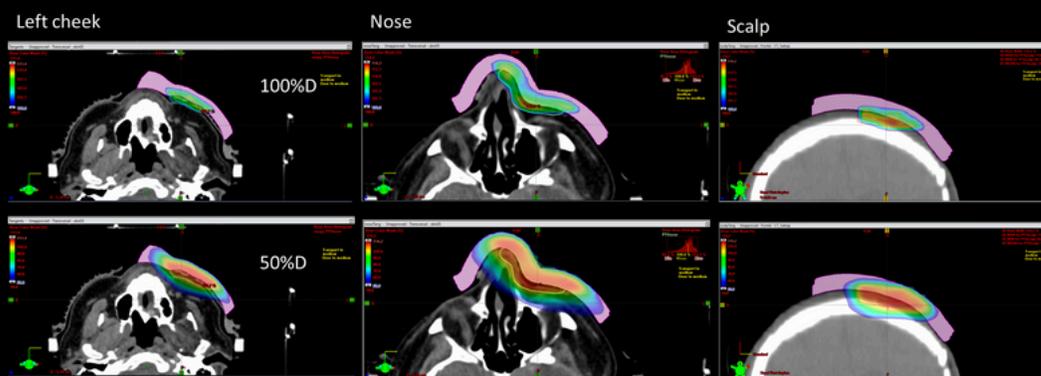

DermaPlan RT addresses the challenges by delivering consistent, high quality plans in as little as two minutes- all with a single button click and no commissioning required.

### What It Does

DermaPlan RT automates the entire planning workflow for superficial indications with photons:

- Structure Generation
- Intelligent Beam Geometry
- Automated Optimization
- Dose Calculation

#### Case Examples:

Planned for Halcyon, Rx to 100%D covering 98%V

### Proven Impact

Factor reductions in time for treatment planning compared to manual electron planning.

#### Planning Time Factor

Reductions:

- 5.6x faster with IMRT
- 2.6x faster with VMAT

Compatible with Eclipse v16 and newer, Halcyon, TrueBeam, & Clinac.

Official Varian  
Alliance Partner
